Questions

- Find f' in each case:
 - $f(x) = 3x^{2017} + \frac{1}{x^{19}} + {}^{201}\sqrt{x+2}$
 - $f(h) = \pi r^2 h$
 - $f(\theta) = \frac{\mu mg}{\mu \sin \theta + \cos \theta}$
 - $f(g) = \frac{\sin g}{g^2 + \ln g}$
 - $3x \cdot f(x) + [f(x)]^2 = \frac{x}{3+f(x)}$
- A kite 50 m above the ground moves horizontally at a speed of 2 m s^{-1} . At what rate is the angle between the string and the horizontal decreasing when 100 m of string has been let out?
- A cone-shaped paper drinking cup is to be made to hold 27 cm^3 of water (or other liquid beverage). Find the height and radius of the cup that will use the smallest amount of paper.
- Find the closest point on the hyperbola $x^2 - 2x - y^2 = 2$ to the following points. You may find it useful to complete the square and parameterise the hyperbola (it's easier than dealing with solving the hyperbola equation for x or y).
 - $(2, 1)$.
 - $(3, 1)$.
